Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.  The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:  Em: RMBL; Sw:, SWISSPROT; Tr:, TRRMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence is the entire insert of clone RPS-110307 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeate; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 Mapping Group. Purther information can be found at http://www.sanger.ac.uk/HGP/Chr20 RPS-110307 is from the library RPCI-5 constructed by the group of Pieter de Jong. For further details see	requests: clomerequest@aanger.ac.uk On Mar 19, 2000 this sequence version replaced gi:5541861. During sequence assembly data is compared from overlapping clones.	Direct Submission  Direct Submission Submitted (05-FEB-2001) Sanger Centre, Hinxton, Cambridgeshire, Submitted (05-FEB-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. B-mail enquiries: humquery@sanger.ac.uk Clone	bukatyota; metazoa; thoroata; trantata; vertebrata; butereostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 153170)	ein kinase; SOX22; SRY; VMP.	HS1103G7  HS1103G7  Human DNA sequence from clone RP5-1103G7 on chromosome 20p12.2-13.  Contains up to three novel genes, the gene for a novel protein similar to mouse VMP, the gene for a novel protein containing protein similar to phosphoprotein C8FW and rat NIPK, and the SOX2Z gene for SRY (sex-determining region Y)-box 22. Contains five CpG islands, ESTs, STSs and GSSs, complete sequence.		81	1921 GTCCATACTCTAGGTTTTGGATACCATGAGTATGTATGTTTACCTGTGCCTAATAAAGGA 1980 		GGCCACCTGGAAAGTCCCCAGGTGGGACTCTTCTGGGGACACTTGGGGTTCCACAATCCCCAG	1801 ATGGGGCTTCTGACCTGAGCACCAAGGTTGAGGGACAGGATTAGGCAGGGTCTGTCCTGT 1860	1741 TGRGGCTRGTTCTTGTCTARCTCARGACTGTTCTGGAATGRGGGTCCAGGCCTGTCARCC 1800	ANGRATICTCCTTCCAGGCCTAAGCCTGGGATTTGGGCCAGAGATAAGAATCCAAACTA	2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 23 Row: k Column: 9
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Web site: http://www.hgsc.bcm.tmc.edu/cdna/
